Additions to the Workshop manual for the models V1000 G5 and 1000 SP - Code 17920161
The illustrations and descriptions in this booklet are indicative only and the manufacturer reserves itself the right to introduce any modification it may deem necessary for better performance or for constructive or commercial reasons without prior notice.
HINTS ON THE PROPER USE OF THIS MOTORCYCLE

Due to its exceptionally high feature, this motorcycle can be considered as in the racing machine class and as such has to be ridden in a sportsmanlike way. For this very reason, it has met the favour of many motorcycle fans but, same as for all racing bikes, it has to be used accordingly.

For instance, for fuel feed this model is fitted with carburettors with pumps and if the twist grip is not used correctly in accordance with the engine revolutions, there might be an excess of fuel which is ejected by the carburettors, ending in the air filter box of the carburettors same.

When travelling at low speed or in other words at low revs, it is necessary for the throttle grip to be used with care since the immission of a greater quantity of fuel might not be fully absorbed by the engine.

At high speed, also in case of abrupt accelerations, the fuel is entirely absorbed and used up by the engine, thus eliminating this risk and conferring to this model the brilliant «kicking up» qualities that make it one of its outstanding features.

MAIN FEATURES

ENGINE
- cylinder disposition: twin cylinder - 4-stroke
- bore: 83 mm
- stroke: 78 mm
- displacement: 844 cc
- compression ratio: 9.8 to 1
- max torque: 7.6 kgm at 6200 rpm

VALVE GEARING
O.H.V., push rod operated

CARBURATION
n. 2 carburettors «Dell’Orto» type PHF 36 B (D) (right) PHF 36 B (S) (left)

LUBRICATION
pressure, by gear pump
wire gauze and cartridge filters in oil sump
normal lubrication pressure 3.8 to 4.2 kg/sq cm
(pressure relief control valve in the sump)
oil pressure sender unit in the crankcase

GENERATOR ALTERNATOR
fitted in the front part of the crankshaft (14V - 20A)

IGNITION
coil-battery ignition with double contact breaker and automatic advance with centrifugal masses
- ignition data
  ignition advance (fixed) 8°
  automatic advance 26°
  full advance (f. + a.) 34°
- contact breaker points gap 0.37 ÷ 0.43 mm
- spark plugs
  Bosch W 5 D
  Lodge 2 HLNY
- plug points gap 0.6 mm
- ignition coils n. 2 fitted on the frame

STARTING
electric starter (12V - 0.7 KW) with electromagnetic ratchet control ring gear bolted on the flywheel starter button (START) fitted on the R/H side of handlebar

TRANSMISSIONS

CLUTCH
twin driven plates, dry type
fitted on the flywheel side
hand controlled by lever on left handlebar

PRIMARY DRIVE
by gears, ratio 1 to 1.235 (Z = 17/21)

GEARBOX
5 speeds, frontal engagement, constant mesh gears.
Cush drive incorporated
pedal operated on the L/H side of the bike
- gear ratios:
  Low gear 1 to 2 (Z = 14/28)
  2nd gear 1 to 1.388 (Z = 18/25)
  3rd gear 1 to 1.047 (Z = 21/22)
  4th gear 1 to 0.869 (Z = 23/20)
  5th gear 1 to 0.750 (Z = 28/21)

SECONDARY DRIVE
by cardan shaft, bevel gear set
- ratio 1 to 4.714 (Z = 7/33)
- overall gear ratios (engine-wheel)
  Low gear 1 to 11.643
  2nd gear 1 to 8.080
  3rd gear 1 to 6.095
  4th gear 1 to 5.059
  5th gear 1 to 4.366

177
FRAME
duplex cradle, tubular structure

SUSPENSIONS
telescopic fork «MOTO GUZZI patent»
- front with oil pneumatic shock absorbers
- rear swinging fork and rear dampers with adjustable external springs concentric to the oil pneumatic shock absorbers

WHEELS
- front WM 3/2.15 x 18" CP2
- rear WM 3/2.15 x 18" CP2

TIRES
- front 100/90 V 18
- rear 110/90 V 18

BRAKES
- front disc type with caliper having 2 cylinders, controlled by hand lever on the R/H side of the handlebar:
  - hydraulic transmission independent from the rear brake:
    - disc dia. 300 mm
    - braking cylinder dia. 38 mm
    - master cylinder dia 12.7 mm

- rear disc type with fixed caliper with two cylinders:
  - foot controlled with pedal on the R/H side of the bike:
    - disc dia. 242 mm
    - braking cylinder dia. 38 mm
    - master cylinder dia. 15.875 mm
  - the rear brake is connected by an hydraulic transmission to a second brake on the front wheel having the same features and size as the hand controlled front brake

DIMENSIONS AND WEIGHTS
- wheel base (loaded) 1.505 m
- max length 2.190 m
- max width 0.640 m
- max height 1.160 m
- min. ground clearance 0.175 m
- dry weight abt 206 kg

PERFORMANCES
- top speed 230 km/h (144 mph), solo
- fuel consumption 5.7 l x 100 km

FUEL AND OIL CAPACITIES
- fuel tank 25 l (6.15 US gls) supergrade petrol (97/100 NO-RM)
  (reserve 3 l about) (3.1/4 quarts)
- oil sump 3 l (3.1/4 quarts) oil «Agip SINT 2000 SAE 10 W/40»
- gear box 0.750 l (1.3/4 pints) oil «Agip Rotra MP SAE 90»
- rear drive box 0.250 l (9 oz abt) oil of which: 0.230 l (8.1/4 oz abt)
  «Agip F. 1 Rotra MP SAE 90» and 0.020 l (3/4 oz)
  «Agip Rocol ASO/R» or Molikote «A» type
- front fork (each leg) 0.060 l (2 oz abt) fluid «Agip ATF Dexron»
- braking circuits (front and rear) fluid «Agip Brake fluid - Super HD»

A = Inspections - Adjustments - Possible replacements - Servicing / C = Cleanings / R = Replacements.

● Operation required for maintaining the vehicle according to emission regulations (USA).

Occasionally, check the electrolyte level in battery, lubricate joints and cables; every 500 km (300 miles) check the engine oil level.
In any case, renew this oil at least once a year.

</tbody>
</table>

The pistons of an engine must be balanced; a weight difference between them of 1.5 gr is allowed.
When fitting a piston check that the class mark stamped on the piston and the word «SCA» (exhaust) are facing the exhaust hole in the cylinder.

N.B. — The above selection values are valid for the model 850 Le Mans II starting from engine n. 80390.
CON-RODS

22.025 ± 22.045

139.975 ± 140.025

Max parallelism and complanarity difference between both axis measured at a distance of 200 mm ± 0.10

13.9.975 ± 140.025

CRANKSHAFT

CHECKING CRANKSHAFT BALANCING

To balance statically the crankshaft it is necessary to add a weight of 1.650 \(\pm\) 1.652 kg.
CARBURATORS

N. 2 Dell'Orto type carburettors «PHF 36 B (D)» (right) «PHF 36 B (S)» (left)

Controls
- throttle control grip on the R/H side of the handlebar;
- easy starter lever for cold engine starts on the L/H side of crankcase.
«A» starting position for cold engine.
«B» riding position.

Standard carburettor settings:
- Choke $\varnothing$ 36 mm
- Throttle valve 60/3
- Atomizer 268 A B
- Main jet 115
- Idling jet 50
- Starter jet 70
- Pump jet 33
- Needle K 18 (3" notch)
- Float 10 gr
- Idling screw adjustment: opens 1 1/2 turns

FLOAT LEVELLING

To level the floats place the carburettor in vertical position as shown in fig. 235.

N.B. - Contrary to what said in the workshop manual code 14 92 01 56 the above values are valid also for model 850 Le Mans II.
REPLACING THE AIR FILTER

Every 6000 km (3700 miles) check conditions of air filter, if necessary clean it using compressed air; it is advisable to replace it every 9000 km (5600 miles).
To replace the air filter lift the saddle, remove fuel tank and side covers. Take out R/H carburettor and undo the screws fixing the air intake to the bike frame: remove the two side screws and take out from the R/H side the container «A» complete with the air filter.
SUSPENSIONS

FRONT FORK LUBRICATION

To replace the oil in the front fork legs, proceed as follows:

- with the bike on the central stand, loosen the side screw «C» locking the steering head to the fork arm; disconnect compensating pipe and completely unscrew the hexagonal screw plug «B»; then undo drain plug «A»;
- slightly press the front part of the bike to force out the plug «B» which is solidal to the shock absorber. Do this paying attention not to damage the instruments panel;
- refit plug «A» and introduce the quantity of fluid necessary (60 cc Agip F. 1 ATF Dexron) through the space existing between the inner diameter of the fork and the shock absorber body;
- release the front part of the bike refit plug «B» and lock the side screw. Repeat the same operation for the other fork leg;
- reconnect compensating pipe and check the pressures keeping to the given values.

OIL PNEUMATIC SHOCK ABSORBERS

The operating load pressures of these shock absorbers are the following;

- front: 2 + 3 kg/sqcm
- rear: 3 + 5 kg/sqcm

To check the pressure it is advisable to use a pressure gauge having a very short pipe (better if any), as the capacity of the pipe may affect the pressure existing inside the shock absorbers. To ascertain to which extent your pressure gauge reduces, when taking the measurement, the pressure inside the shock absorber it is sufficient to carry out two consecutive measurements: the difference between the two readings gives approximately the pressure reduction occurring whenever a measurement is taken.

The measurement must be taken with the bike on the central stand and with cold shock absorbers; to charge the shock absorbers only use moistureless air.

N.B. — Pressures gauges as above, are found on the market; however it can be necessary to place a supplementary gasket in the gauge head, in order that the valve stem inside the shock absorber will be pressed only when the gasket has made a perfect tightening.
KITS SUPPLIED ON REQUEST

The following kits remain valid:

- GEARBOX SET OF STRAIGHT TOOTHED GEARs

foreseen in the workshop for the model 850 Le Mans II - code 14920156.
1 Parking light, front (4 W)
2 High beam bulb (45 W)
3 Low beam bulb (40 W)
4 3-way connector for headlight (AMP)
5 4-way connector Molex
6 15-way connector
7 12-way connector
8 Ignition key (3 positions)
9 Voltmeter (3 W)
10 Tachometer (3 W)
11 Rev-counter (3 W)
12 Warning light, right turn signal (1.2 W)
15 Warning light, parking (1.2 W)
16 Warning light, high beam (1.2 W)
17 Warning light, brake fluid level (1.2 W)
18 Warning light, oil pressure (1.2 W)
19 Warning light, generator (1.2 W)
20 Warning light, neutral position (1.2 W)
21 Warning light, left turn signal (1.2 W)
22 Switch for simultaneous turning on of all flashers
23 Turn flasher, front, right (21 W)
24 Turn flasher, front, left (21 W)
25 Turn flasher, rear, right (21 W)
26 Turn flasher, rear, left (21 W)
27 Engine starting and stop button
28 Flashing light, turn signals, and horn switch
29 Horn
30 Front brake switch (STOP)
31 Rear brake switch (STOP)
32 Flashing light relay (FLASH)
33 Rectifier
35 Alternator (14 V - 20 A 21)
35 Regulator
36 Battery
37 Starter motor relay
38 Starter motor
39 Terminal block with fuses (16 A)
40 Tail light
41 Rear stop light (21 W)
42 Number plate and rear parking light (5 W)
43 3-way connector
44 Flasher box
45 Oil brake level solenoid
46 Neutral position solenoid
47 Oil pressure solenoid
48 Coils
49 Spark plugs
50 Contact breaker
IGNITION SWITCH POSITION

Position 1: No contacts
Position 2: Contacts on all terminals
Position 3: Contacts on terminals 16/30
