These charts show the approximate location of engine and frame numbers for all motorcycles listed in this book and for mopeds. If you should encounter a vehicle not listed in this publication, it is suggested that you check all the points shown here. Chances are very good you will find the numbers you are searching for.

1. Headstock.  
2. Left side of crankcase below cylinder.  
3. Top of crankcase behind cylinder.  
4. Frame X member below junction of saddle and gas tank.  
5. Front of crankcase.  
6. Top of left side of crankcase.  
7. Left side of downtube below headstock.  
8. Top of crankcase below cylinder, right side.  
9. On cylinder head.  
10. Right side rear for, forward of wheel hub.  
11. Front of left crankcase.  
12. Front left downtube.  
13. Recess, under left crankcase.  
14. Right side radiator frame.  
15. Left side of fork to fender extension.  
16. Underside of right crankcase.  
17. Left side rear for, forward of wheel hub.  
18. Right side of down tube below headstock.  
19. Right side of crankcase.

#### ACKNOWLEDGEMENT

We wish to express our appreciation to the many motorcycle manufacturers and importers who assisted us in the gathering of information necessary for a book of this kind. With only one exception, we received full cooperation in this project. That exception was Harley-Davidson Motorcycles who claim this information to be "confidential." We regret this decision by Harley-Davidson since the information requested from them is of such nature as to be readily available from public sources. Fortunately, we were able to include Harley-Davidson in this book.

The information contained in this book is as accurate and complete as was possible to obtain from a large number of sources. We can not, however, absolutely guarantee its accuracy and no such warranty is implied.

## THE AUTHOR

Lee S. Cole is a private investigator and Consultant specializing in Vehicle Theft, Fraud and Fire cases. He formerly was Assistant Manager of the Pacific Coast Division of the National Automobile Theft Bureau. He attended the University of North Carolina and has since received an LLB degree. During the Korean conflict, Mr. Cole was assigned to the Military Police Corps, Criminal Investigation Division and has worked for the State of North Carolina as an investigator. In 1955, he was appointed Special Agent with the National Automobile Theft Bureau. In January 1964, he was promoted to Chief Special Agent and five years later, was named Assistant Division Manager. Mr. Cole teaches Vehicle Fire and Theft Investigative Techniques at numerous schools and universities throughout the United States and Canada. He was the principal editor of NATB's Passenger Vehicle Identification Manual and is the author of a large number of training bulletins, articles and books on Motor Vehicle Identification, Theft and Fire Investigation.

### Lee Books

The "Books" section contains a summary of the author's books and training materials. All books listed "Passenger", "Motorcycle", "Harvest" and "Tire". The "Books" are preceded by a brief usage index. Since there are many books published in motorcycle, it would be very difficult to keep up with all the latest publications about motorcycles and larger production vehicles. In addition, it was felt, this would prevent the author from being able to adequately cover the early 1960's, the factory issued production catalogues and the various non-teaching type books, "Topics" as well as "Topics".

In 1903, an engineer named Will Harley and a salesman, Arthur Davidson, formed the Harley-Davidson Company. This well known motorcycle manufacturer has produced a series of the most successful machines in the world. Today, it is the only surviving motorcycle producer in the United States.

## Investigation of Motorcycle Thefts

### A Brief History of the Motorcycle

The earliest known version of the motorcycle was the one invented by Gottlieb Daimler of Germany when he fitted his 4 stroke single cylinder engine on his son's bicycle. This success did not really impress Daimler who pursued his inventions in the automobile field.

In the United States, Lucius Copeland placed a one cylinder steam engine on the front wheel of a Star bicycle and produced the first American motorcycle. Between 1895 and 1901, a number of motorcycles were developed and built. The first American motorcycle to be produced in quantity was the "Orient", built in Waltham, Massachusetts by the Waltham Manufacturing Company in 1900.

By 1901, the motorcycle industry in the United States was producing machines with names like "Marsh", "Minneapolis", "Mitchell" and "Indian".

The "Indian" was conceived by a bicycle racer named Oscar Hedstrom who became interested in motorcycles. He formed a company with a bicycle manufacturer named George Hendel and began producing Indian motorcycles. At one time, this company produced 400 Indian motorcycles per day. By the early 1960's, the factory ceased production entirely and the machine now bearing the name "Indian" is built in Taiwan, China.

In 1903, an engineer named Bill Harley and a salesman, Arthur Davidson, formed the Harley-Davidson Company. This well known motorcycle manufacturer has produced a series of the most successful machines in the world. Today, it is the only surviving motorcycle producer in the United States.

During World War II, Soichiro Honda operated a small plant producing piston rings for Japanese military vehicles. Following the surrender of the Japanese, Honda purchased 490 surplus gasoline engines made for the powering communications equipment. He mounted these on bicycles and Honda Motorcycle Company was in business. He began to produce all necessary components and by the early 1960's Honda Motorcycles were being introduced to the United States. The rest, as they say, is history. Honda sells more motorcycles in the United States than all other manufacturers combined.

California, the state with the greatest number of motorcycles, is also the state with the greatest number of motorcycle thefts. In 1970 there were 14,577 such thefts recorded. In 1979 this number had increased to 24,637. Of these, 13,264 were listed as recovered. With the coming of 1980's, all vehicle theft experienced a drop in frequency and in 1983, there were 14,667 motorcycles reported stolen. The recovery percentage was listed at 62.1%. By mid-1984, 6,942 motorcycles were reported as stolen, a drop of 4% from the year before at mid-point.

At the end of 1984, 14,690 motorcycles were reported as stolen with 9,272 listed as recovered. Of these, 7,109 were listed as "driveable" (probably an over optimistic view) and the remaining 2,163 wrecked, stripped and/or burned. The recovery factor was 63.1%. The popularity of theft by model followed almost identically with popularity of sale, with Honda ranked number one followed by Yamaha and Kawasaki.

Motorcycle theft is not only a problem in North America but in European countries as well. A special report filed by Larntjanst Ab in Sweden reveals that in 1982 the total number of motorcycles registered in that country stood at 139,151. During that same year 2,610 of these machines were stolen. The theft frequency was about 2.3%. Compare this to cars where frequency was about 1%. At least 30% of these stolen motorcycles were not recovered.

## Investigation of Motorcycle Thefts

One of the contributing factors to the low recovery rate of stolen motorcycles is the lack of knowledge on the part of law enforcement officers in the location and meanings of identification numbers. Because of the proliferation of makes and models of motorcycles in recent years this is not too surprising. Inconsistencies in the VIN system, especially in the older machines added to the problem.

Another contributing factor is confusion over the proper recording of identifying numbers at the time of original sale and registration. Surveys have shown that in the early 1970's incorrectly registered motorcycles made up 20-55% of the total number of stolen motorcycles, depending upon the particular make. As an example of this problem, suppose we have a Honda CB750 model bearing:

Frame #CB7501044957

Engine #CB750E1045372

We could find this motorcycle registered as 1044957 with the model prefix left off or as CB750E1045372, registered by the engine number. Some motorcycle dealers were only submitting the last five digits for registration.

Some states have taken steps to overcome this situation by requiring tape lifts of engine and frame numbers be submitted with the Dealers Report of Sale. This practice eliminates many errors in registration procedures found in earlier cases. As a rule the motorcycle frame number is that number used for registration and title purposes. One exception to this rule is the 1969 and older Harley-Davidson motorcycle which was registered by the engine number. From 1970 to the present the engine and frame numbers of the Harley-Davidson are the same or the last six digit derivative of the complete VIN (this latter practice began in 1981).

Another contributing factor to motorcycle theft is the ease with which they can be stolen and disassembled. Ignition locks are relatively easy to defeat and sometimes duplicate keys are obtained. Motorcycles are easy to transport in trucks and vans. Stolen motorcycles are sometimes completely stripped and unidentifiable parts sold. Identification numbers on other stolen motorcycles are removed from frames and engines. The Western State Auto Theft Investigation manual published by the Northwest Chapter lists the following common methods for removing these numbers.

1. Factory numbers are stamped into a cast surface. Grinding the numbers will leave a fresh area with sharp surfaces or edges. Sometimes, the file will slip and leave definite markings on studs and cooling fins. Thieves also sometimes grind off the engine numbers and sandblast the number boss to give it a textured appearance.
2. Frame numbers are generally stamped on the fork head or down tube and if ground off will usually leave a flat or oval surface, instead of being round as originally made by the manufacturer.
3. Welding is sometimes used to obliterate factory stampings. On aluminum engines, the heli-arc process is used. On steel frames the arc or oxyacetylene welding is used to obliterate the numbers. Both methods are identifiable by the lack of similarity between the surface of the welded area and the coating or extrusion. Where the difference in surface texture is not apparent, other indications should be noted, such as depressions or holes where welding slag has been deposited. In cases where these methods are suspected, confirmation may be readily made by processing the suspected area with an acid solution or Heinz solution and a cotton swab. The area that has been heli-arc'd or arc welded will readily show up as a darker irregular oval shaped outline even if other number have been re-stamped.

4. Over-stamping the whole number or some digits is very popular and is similar in concept to the cattle rustler who alters brands on stolen cattle. Existing numbers are simply altered by changing a 3 to an 8, a 1 to a 7, or 4, or altering any of the numbers in a similar manner. This often causes numbers altered in this manner to be out of alignment with original digits and the depth to which the number is stamped may vary. Often altered numbers will have a blurred appearance.

The "salvage switch" M/O works as well with motorcycles as it does with cars. The thief purchases a wrecked motorcycle and removes the identification numbers. He then steals a similar machine and places the identity of the wrecked motorcycle on the stolen one.

A common M/O used is to steal a motorcycle, grind off its identifying numbers and then apply to Motor Vehicles registration service for an assigned number, claiming the motorcycle is "home made". Sometimes a left or right case half or a complete frame is purchased, bearing no identifying numbers and placed on a stolen motorcycle.

Frequently, engines and frames are painted or chromed to disguise evidence of alterations. Motorcycle manufacturers do not paint or chrome engines. "Bondo" is frequently used on frames to cover altered, obliterated or drilled out numbers.

Thieves are rarely able to so alter the identification numbers of a motorcycle without leaving some evidence of this. Recognition of such alteration is of primary importance to the vehicle theft investigator. Remember the general rule, "Good numbers look good, bad numbers look bad". Sure, there are going to be cases of very expert alterations but these are in the minority. Most motorcycle thieves are not that skilled.

Be certain that when searching for evidence you give a special attention to locating dies, files, chisels, emery wheels, punches, paint and other equipment used in removing, altering and replacing motorcycle identification numbers. Laboratory analysis can match these items with alteration jobs done on other vehicle in other areas.

## Motorcycle Records

The National Automobile Theft Bureau is a non-profit service organization maintained by associated insurance companies for the purpose of assisting law enforcement in suppressing vehicle thefts, identifying vehicles, investigating theft rings, training in identification and investigative techniques and maintaining records to complement these services.

The NATB maintains the following records pertaining to motorcycles:

### 1. Harley-Davidson Motorcycles

- A. Engine or VIN from 1958 to present.
- B. 1958 and 1959 Crankcase Numbers. not indexed and requires hand search.
- C. 1960 to present indexed by Crankcase Number.
- D. 1960 through 1969 Fork Numbers and Transmission Numbers. Not indexed and requires hand search.
- E. 1970 to present updated monthly on magnetic tape.
  - 1. Indexed by Crankcase Numbers Fork Numbers and Transmission Numbers.

### 2. Kawasaki Motors Corporation, U.S.A.

- A. 1974 to present indexed by Frame Number
- B. 1974 to present indexed by Engine Number updated monthly on magnetic tape.

### 3. American Honda Motor Company

- A. 1968 to present indexed by Frame Number
- B. 1970 to present updated monthly on magnetic tape.
- C. Indexed by Frame and Engine Number.

NATB maintains offices and special agents throughout the United States. There is a similar organization in Canada called the Canadian Automobile Theft Bureau, a branch of the Insurance Crime Prevention Bureau.

## VIN SYSTEMS

Prior to 1980 each manufacturer adopted and put in use their own method of identifying their product. Some of these systems were all numeric, some were alpha and numeric. Some series identified the engine alone with no numbers assigned to the frame. Some systems consisted of 12 characters while some had only 4.

It was obvious that a more uniform approach to the problem was needed and by 1981 a new system was developed after numerous conferences and experimentation. While there are some problems still existing, this move toward standardization of the VIN was most welcome. With very few exceptions it has been adopted. Off road machines are not required to comply with 17 digit VIN.

The VIN system in use today is described as a "17 character VIN rigid as to content and position and including a 'check' digit". This system is illustrated by the following example:

The method of arriving at the "Check Digit" is illustrated by the following:

Motor vehicles now have a 17 character VIN with a "Check Digit" included. The first three characters identify the nation of origin, manufacturer, make and type of vehicle. The second section consists of five characters and identifies the "vehicle attributes" (type, line, engine type, series, etc.). The ninth character is the "Check Digit" and is intended to verify the accuracy of the VIN as to the sequence and format. The third part of the VIN is eight characters in length and identifies the model year, plant and sequential production number. The following table will enable you to decode the VIN's "Check Digit".

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
A																	
B																	
C	8	7	6	5	4	3	2	10	0	9	8	7	6	5	4	3	2
D																	

final sum

111

On line "A" enter the 17 digit VIN. On line "B" enter the "assigned value" of each character of the VIN, utilizing table "B", shown below. \* Multiply the numbers in line "B" with the numbers in line "C", for each of the 17 digits in the VIN. Record the product of each of these separate computations in the appropriate boxes in line "D". \* Add together all of the numbers recorded in line "D" and enter the final sum in the space provided. \* Divide the final sum by the number "11". The remainder of this division is the "Check Digit" (the 9th character of the 17 digit VIN.) If the remainder of this division is a single digit number, then it should match the "Check Digit" in the VIN exactly. If the remainder is the number "10" then the "Check Digit" is the letter "X".

TABLE "B"

A=1	J=1	T=3	I=1	6=6	Assign to each number in the VIN
B=2	K=2	U=4	2=2	7=7	its actual value and record that
C=3	L=3	V=5	3=3	8=8	value in the appropriate box "B".
D=4	M=4	W=6	4=4	9=9	
E=5	N=5	X=7	5=5	0=0	The letters of "I", "O", & "Q"
F=6	P=7	Y=8			are never used in the new 17
G=7	R=9	Z=9			digit VINs.
H=8	S=2				

To determine the year of manufacture from the 17 digit VIN (character #10 of the VIN), use the following:

1980=A      1982=C      1984=E      1986=G  
1981=B      1983=D      1985=F      1987=H    Etc.

EXAMPLE: 1981 Ford Mustang VIN - 1FABP12A4BR101093

Final Sum = 246

$$\begin{array}{r} 22 \\ 11 \overline{) 246} \\ 22 \\ \hline 26 \\ \hline 22 \end{array}$$

Check Digit-----4

#### EXPLANATION OF THE WMI

("World Manufacturer Identifier" or "Nation of Origin")

The WMI is the first three digits of a 17 digit VIN. The first two digits are allocated by the International Standards Organization and a record of these is maintained by the Society of Automotive Engineers, Inc. of 400 Commonwealth Drive, Warrendale, Pennsylvania 15096, United State of America. The third digit is allocated by a country's representative body. For the United Kingdom, it is the British Standards Institute, Maylands Avenue, Hemel Hempstead, Herts.

Below are details of the numbers and letters allocated, together with the recipient country.

<u>1st D</u>	<u>2nd Digit</u>	<u>Country</u>	<u>Continent</u>
A	A to H	South Africa	Africa
A	J to M	Ivory Coast	Africa
B	A to F	Angola	" B B
B	G to K (except I)	Kenya	"
B	L to R (except Q)	Tanzania	"
C	F to K	Dahomey	"
C	F to K (except I)	Malagasy	"
C	L to R (except Q)	Tunisia	"
D	A to E	Egypt	"
D	F to K (except I)	Morocco	"
D	L to R (except Q)	Zambia	"
E	A to E	Ethiopia	"

The 1st & the 2nd digits denote the country code and  
digits are allocated by the International Bureau of Telecommunications  
and of these is allocated by the Society of American Engineers  
and Communications Bureau, Bernice, Massachusetts, United  
States of America. The third digit is allocated by a country's  
representative body. For the United Kingdom, it is the British  
Postcode Institute, Royal Mail, Royal Mail, London, SW1.

AJS

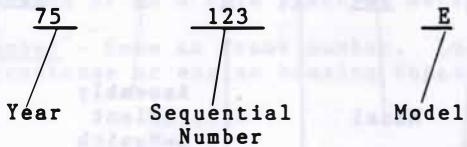

AJS of Andover, Goodworth, Claysford. Hants., England

VIN - Stamped into left side of headstock.

Engine Number - Stamped into left side of crank case under cylinder barrel.

The frame and engine numbers are the same and consist of 5 numbers and possibly a letter at the end.

VIN SYSTEM

E = Enduro  
T = Trail/Trial  
S = Scrambler  
SS = Scrambler with single rear shock absorber

They make the following models:

<u>Scrambler</u>	<u>Trials/Trails</u>
250cc	250cc
360cc	260cc
410cc	
490cc	

ARIEL

VIN SYSTEM: (No example available. No longer in production.)

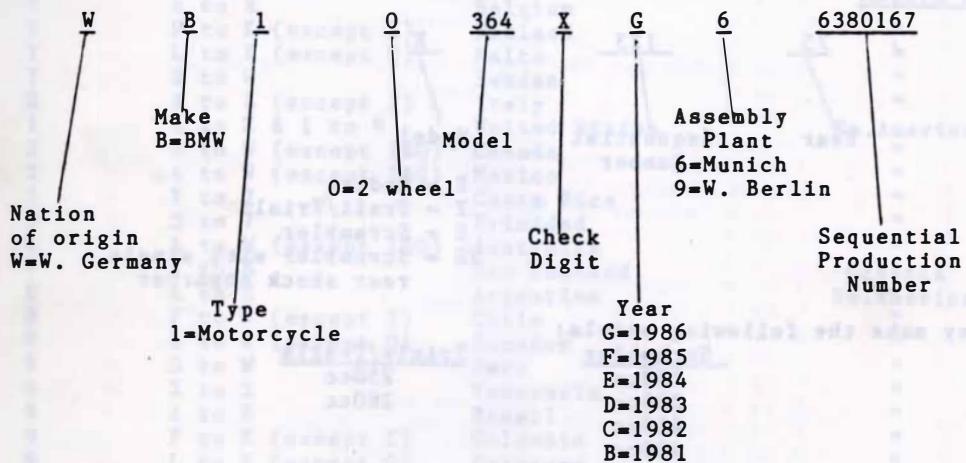

VIN on plate and stamped into left side of headstock.

Engine Number - Stamped into left side of crankcase under cylinder barrel.

BMW

Bayerische Motoren Werke  
(BMW Motorrad GMBH, Munich, West Germany)

VIN SYSTEM: 1985 - 1981

VIN Location - The complete 17 digit VIN is recorded on the Federal Certification label located on the right side of the frame below the right engine cylinder. A derivative of this number is stamped into the down tube brace below headstock on right side. Frame numbers are protected by inclusive trademark symbols. The number includes the plant designator and sequential number.

Engine Number - Same as frame number. Located on right side below cylinder, near oil dip stick.

Models: R65 = 3640 (650cc)  
 R65LS = 3650 (650cc)  
 R80G/S = 3480 (798cc)  
 R80ST = 3490 (798cc)  
 R80RT = 4480 (798cc)  
 R100 = 4350 (980cc)  
 R100CS = 4360 (980cc)  
 R100RS = 4370 (980cc)  
 R100RT = 4490 (980cc)

#### Pre 1981 Models

VIN SYSTEM: 4001044

All numeric with no year or plant indicators.

VIN Location - Frame number on right side or in front of headstock, either stamped or on a thin piece of metal plate riveted to frame.

Engine Number - Same as frame number. Located on either right or left side of crankcase or engine housing depending on model.

BSA

(Birmingham Small Arms Corporation)  
Birmingham, England  
(Production ceased August, 1974)

VIN SYSTEM: (1969-1974)

VIN SYSTEM: (Prior to 1969)

DATE OF MANUFACTURE: (1969-1974 VIN)

1st LETTER	2nd LETTER
A - January	C - indicates 1969 model
B - February	D - indicates 1970 model
C - March	E - indicates 1971 model
D - April	G - indicates 1972 model
E - May	H - indicates 1973 model
G - June	J - indicated 1974 model
H - July	
J - August	
K - September	
N - October	
P - November	
X - December	

To avoid confusion, the letters F, I, O and L have not been used.

VIN LOCATION - On 1965 and earlier models, frame number located near front of gas tank. On 1966 and later models, frame number stamped lower on frame, almost directly in front of engine number.

Engine Number - On left side of crankcase below cylinder.

1. Starting in June, 1966, the frame and engine numbers should match; however, exceptions have been noted.
2. Starting in 1969, a BSA logo appears on the engine boss with the exception of the single cylinder and smaller models.
3. The engine and frame numbers are hand stamped and generally uneven, although the model designator is usually even and a "jig" is normally used to stamp these.
4. The engine number is stamped directly on a sand casted metal raised flat boss; never on a smooth surface.
5. There are many inconsistencies in VIN registration and computer entries due to recent changes in VIN code and dealer confusion. The model number is sometimes entered as a prefix instead of a suffix on 1969 and later models.

Models:

B50SS	-	Goldstar	A75R	-	Rocket
B50	-	Victor Trail	B500MX	-	Victor
B50MX	-	Victor MX	B50MX	-	Sceptre (1974)
A65T	-	Thunderbolt	A50R	-	Royal Star
A65L	-	Lightning	A65F	-	Firebird Scrambler

BENELLI

Benelli Motorcycles, Pesaro, Italy  
Imported by Cosmopolitan Motors  
301 Jacksonville Road  
Hatboro, PA 19040

VIN SYSTEM:

66846

The VIN has no particular significance in its configuration. The die stamps used by the manufacturer are not unique.

VIN Location -

On current models, this number is stamped on the right side of the headstock, and on a plate attached to the down tube. The numbers are protected by a five point star before and after the number. On older models, the frame number was sometimes located on an engine mounting plate on top of either side of the crankcase near the engine number.

Engine Number -

Located on the top or lower side of either crankcase. The numbers are stamped into a raised boss and are not protected by the stars as is the frame number. The engine and frame numbers usually match, but are not always the same.

Models

Range from a 65cc Dynamo Trail bike to the 750cc SEI model with 6 cylinders

BRIDGESTONE

Bridgestone Motorcycle, Tokyo, Japan  
(Discontinued - 1976)

VIN SYSTEMS: No example available.

VIN Location - Right side of frame, bottom near suspension swing pivot, on plate.

Engine Number - At rear of crankcase, right side or near kick started shaft.

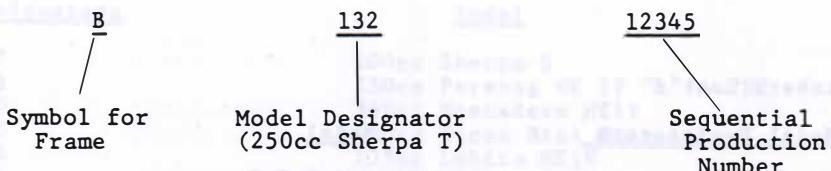

Models -

100 G/P	-	100cc
100 TMX	-	100cc
M11 RS-1	-	200cc
MII SS-1	-	200cc
350 GTR-1	-	350cc
350 GT0-1	-	350cc

## BULTACO

Compania Espanola De Motores SA, Barcelona, Spain

### VIN SYSTEM:

VIN Location - Stamped into headstock, right side. The dies are not unique and the number is not protected with any distinctive marks.

Engine Number - Located on top of right side of engine crankcase behind cylinder head. This number is the same as the frame number, except for the prefix "M". This letter is preceded by another letter indicating the cubic capacity of the engine.

VIN Location - Stamped on steering head, left side.

Engine Number - Stamped on bottom of crankcase. Engine displacement is stamped on left side of cylinder between 2 bottom cooling fins. Engine number may also be found on right side of rear mount boss.

CAPRIOLA

(No Longer in Production)

VIN SYSTEM: 39972

Vin Location - Middle of left side of frame near crankcase.

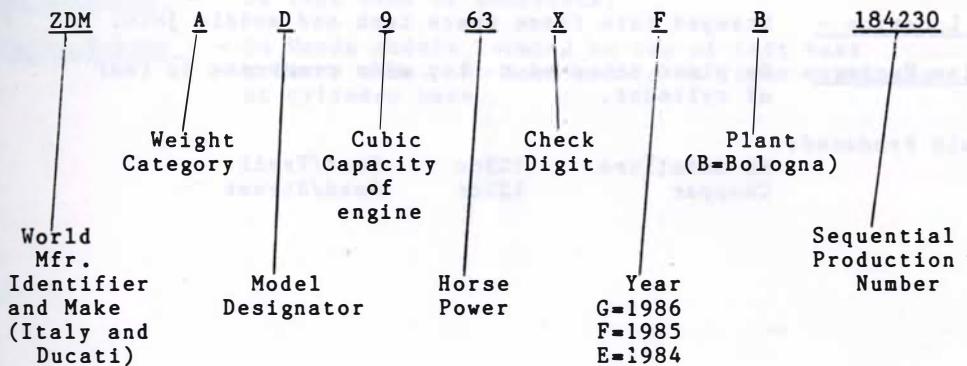

Engine Number - 39716

Engine Number Location - On lower left side of crankcase.

## DUCATI

Ducati Meccanica, Bologna, Italy

### VIN SYSTEM:

#### Model Designators:

P = 500 Pantah  
D = 900 Supersport

#### Cubic Capacity of Engine

5 = 500cc  
6 = 600cc  
9 = 900cc

VIN Location - Stamped into plate riveted to headstock with sequential portion stamped into frame nearby.

Engine Number - Stamped into engine, rear center, at top. Same as frame number.

Older Models - Locations same as above. Typical VIN: 482-0-3427

FANTIC

(No Longer in Production)

VIN SYSTEM: No example available.

VIN Location - Stamped into frame where tank and saddle join.

Engine Number - On plate attached to top side crankcase to rear of cylinder.

Models Produced:

RC Caballero	125cc	Road/Trail
Chopper	125cc	Road/Street

GREEVES

Greeves Motorcycles, Thundersley, England  
(Production discontinued - 1976)

**VIN SYSTEM:** No example available.

VIN Location - On left side of headstock.

Engine Number - On Woods models located on top of left hand primary case. On Moto models on right crankcase at cylinder base.

GUAZZONE

(No longer in Production)

VIN SYSTEM: 05124

Vin Location - On down tube of frame near front engine mount.

Engine Number - Same as VIN (Frame Number)

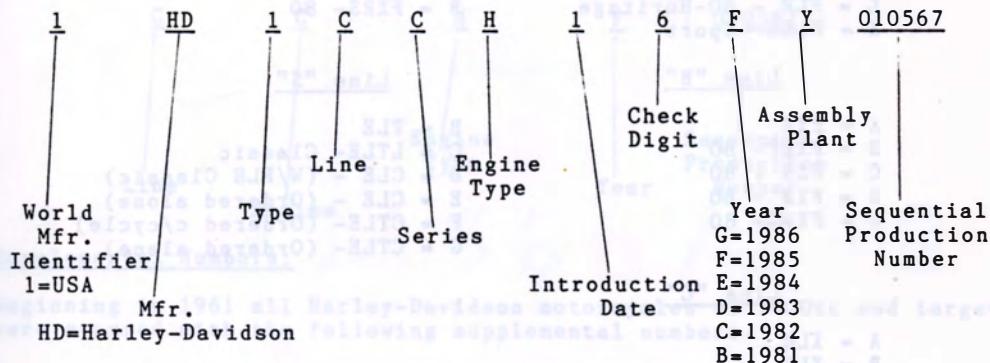

Engine Number Location - On front engine mount at junction with down tube.

## HARLEY-DAVIDSON

Harley-Davidson Motor Co., Milwaukee, WI

According to R.L. Polk Company, Detroit, during the first quarter of 1985 Harley-Davidson Motorcycles comprised 3.64% of new registrations. In 1985 there were 1,369 unrecovered Harley-Davidson in California.

VIN SYSTEM: 1981 - 1986

VIN Location - Complete 17 digit VIN is stamped into the headstock on the right side with the exception of the FLT model which is on the left side. In 1982, Harley-Davidson discontinued stamping protective stars at the beginning and end of VIN. The complete 17 digit VIN is repeated on the Federal certification label affixed to the down tube on the right side.

Engine Number - Stamped on the right side of case to right of front cylinder. Beginning in December, 1982 all 140cc engines have number stamped on left side below cylinders. Engine number is a derivative of the VIN.

**EXAMPLE:**

C Line	C Series	H Engine Type	F Year	<u>010567</u> Sequential Production Number
-----------	-------------	------------------	-----------	---

Supplemental Numbers:

Beginning in 1961 all Harley-Davidson motorcycles of 1000cc and larger were stamped with the following supplemental numbers.

1. Frame number on left side of headstock (until 1969)
2. Fork stop number on triple clamp
3. Transmission number on right front face of case

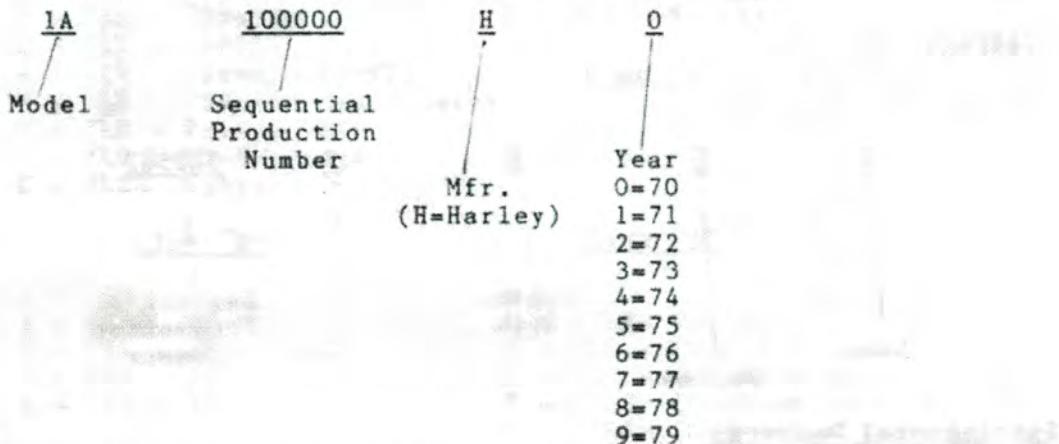

Records searches on all of the numbers should be referred to the National Automobile Theft Bureau.

VIN SYSTEM - 1970-1980 AND ENGINE AND FRAME NUMBER LOCATIONS -

In 1970, Harley-Davidson changed their identification system in an effort to obtain uniformity. On 1970 models engine numbers are located on the right half of the crankcase near the front. Early engines were still manufactured with the boss on the left side left blank. On occasions, thieves will stamp fictitious numbers on this boss which often appear genuine. In 1970, Harley-Davidson began stamping frame numbers the same as the engine numbers. The frame number is located on the right side of the frame head or headstock, on a raised boss. Both the frame and engine numbers were preceded and followed by a star.

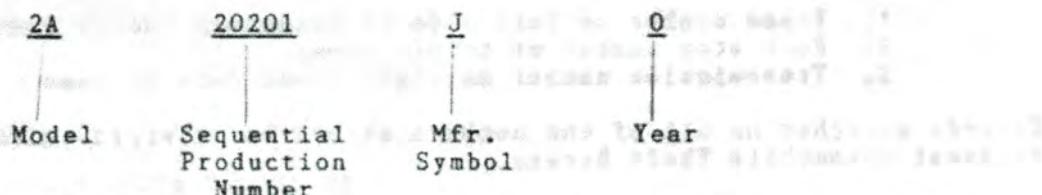

Example: \*1A10000HO\*

The VIN system starting in 1970 consists of the following: the first two digits indicate the model, the next 5 digits comprise the sequential numbers, the next digit indicates the manufacturer and the last digit the model year.

In 1980 the manufacturer's symbol was changed to "J"

Example:

The model designator was also changed as per the following example:

Pre-1970 Models                            Post 1970 Models

1. FLP.	1A
2. FLH	2A
3. FX	2C
4. XLH	3A
5. SX350	3C
6. XLCH	4A
7. GE	5A
8. SPRING SS	6A
9. MLS-125	7A
10. M-65-S	8A
11. ERS	7B
12. MSR	8B

If the frame or engine number requires correction, the number originally stamped will not be removed. The original number will be lined out at the factory. The new number or correct number will be stamped immediately above or below the incorrect number.

Example:

\*1A 10000HO\*

\*1A 10000HO\*

In addition, Harley-Davidson began using a distinctive series of letter and number stamps called "Posident Characters".

0112345667899

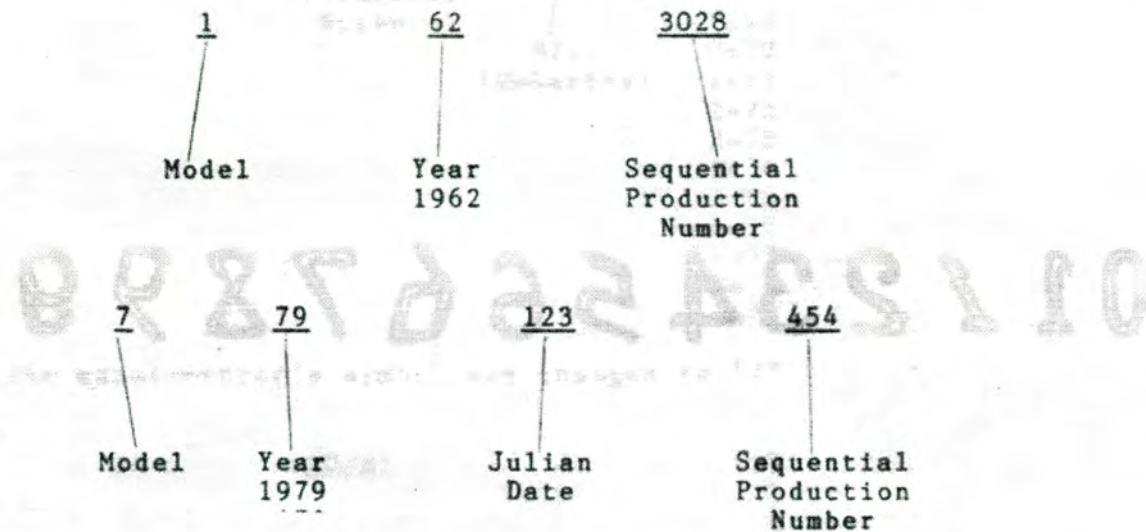

In 1970, between the dates of January 1 and February 1, all machine code was phased out of engines in the Americas for the engine numbers. This was officially implemented on February 1, 1970 and the machine codes affected by the following table. (Note: 10 = 00000000)

Code	Machine Code	Posident Number
1A	10000	10000HO

### Crankcase Numbers:

In addition to the VIN - Engine number there is a series of numbers located on the bottom half of the engine crankcase. In earlier models this was located on both case halves but now it is found on one half only. These numbers are not a repeat of the VIN.

### Examples:

Following is a list of model prefixes and the associated model for some crankcase number:

<u>Case Prefix</u>	<u>Associated Model</u>
1	61 cubic inch E or EL model and 74 cubic inch FL and FLH models.
2	125 cubic inch S model and 165 cubic inch ST and STU models.
3	45 cubic inch W, WL, WLD, G and GA models.
4	75 cubic inch and 80 cubic inch V, UL, VH, and UHL models.
5	45 cubic inch and 55 cubic inch K, KRM, KH, KHK and KHRM models.
6	125 cubic inch B model.
7	55 cubic inch "Sportster" XL, XLH, XLC and LCH models.

In 1979, between the dates of January 1 and February 6, the crankcase code was stamped on the engine in the location for the engine number. This oversight was corrected on February 7, 1979. The motorcycles affected by this ran from VIN ..43000H9 to ..48199H9.

VIN SYSTEM - Prior TO 1970

Prior to 1970, all Harley-Davidson motorcycles were registered by the engine number. This was the number referred to as the VIN. The engine number for these years was located on the left engine case on a raised boss. The boss bears the same pebbled effect as the surrounding area. The pre-1970 Harley-Davidson VIN consisted of two numeric characters followed by one or more Alpha characters and ending with four or more numeric characters. The following is a typical example.

<u>67</u>	<u>FLH</u>	<u>11345</u>
Year	Engine Type and Engine	Sequential Production Number

The following list indicates the engine type and/or cubic displacement of the most common models. The Alpha characters indicate engine type and cubic displacement. The most common models are:

- |                |  |
|----------------|--|
| 1. W-WL-WLD    | 45 cubic inch (cui) side valve, 1937-1954      |
| 2. K-KRM       | 45 cubic inch (cui) side valve 52-53           |
| 3. G-GA-GE     | 45 cubic inch (cui) side valve 3 wheeler 37-54 |
| 4. KH-KHK-KHRM | 55 cubic inch (cui) side valve 54-56           |
| 5. XL-XLH-XLCH | 55 cui overhead valve Sportster since 57       |
| 6. E-EL        | 61 cui overhead valve, Twin-1954               |
| 7. U-UL        | 74 cui side valve, Twin, 1937-1954             |
| 8. F-FL-FLH    | 74 cui overhead valve                          |
| 9. UH-ULH      | 80 cui side valve, 1937-1954                   |
| 10. S          | 125cc 2 stroke from 48 - 52                    |
| 11. B          | 125cc 2 stroke from 55 - 59                    |
| 12. ST-STU     | 165cc 2 stroke from 60 - 61                    |
| 13. BT         |  |
| 14. BTU        | 165cc 2 stroke from 60 - 61                    |
| 15. BTU        | 175 2 stroke from 62 - 66                      |

Beginning in 1962 and continuing until 1969, the first numerical digit in the production number (the first number following the model designator) will be an even number for even years and an odd number for odd numbered years. If the sequential production number contains 5 rather than 4 digits, the first two numbers will be even for even years and odd for odd numbered years.

Examples: 1. 62 FL 2439 - even  
2. 67 XLCH 1666 - odd  
3. 64 FL 10221 - even  
4. 65 xlh 11631 - odd

HARLEY-DAVIDSON BASIC MODEL HISTORY

1. The Knucklehead (1927-1947). This model gets its name from the unique type of engine used which was an overhead cam engine 61 or 74 cubic inches. The engine was mounted on a hard tail or rigid frame with large coil springs in the front (springer forks). The Knucklehead is frequently converted into a "chopper".
2. Hydro Glide (1948-1957). The hydro Glide also had a rigid frame which was slightly different from the Knucklehead frame. There is more clearance between the cross and case bars. Due to this additional space, it is easy to put a Knucklehead engine on a Hydro Glide but it is difficult to put a Hydro Glide engine in a Knucklehead. The front end had telehydraulic forks which are similar to shock absorbers. This type was equipped with a fork head lock.
3. "Hard Tail". (1957 frame only) The frame only was sold which was equipped with a steering head lock.
4. Duo Glide (1958-1965). This model has a pan head engine and a frame with a rear portion that swings. The swing arm can be adjusted. There are also conversion kits available that change the swing arm to a rigid tail. An electric starter could be purchased as an option on this model.
5. Electra Glide (from 1966). The electra Glide had an overhead cam and a pan-like engine that was more refined than previous models. This model has many of the same features as the Duo Glide and was equipped with a kick starter until 1968 after which the kick starter was an option. This model was the first one to have an electric starter.

Since 1965 many Harley-Davidson motorcycles were manufactured in Italy.

HODAKA

Hodaka Motorcycles, Tokyo, Japan and Pabatco, Athena, Oregon, USA  
(Production discounted - 1979)

VIN SYSTEM

B 12345

Number consists of letter prefix and five numerals.

VIN Location - On plate riveted to frame on left top of shock absorber mount or on bottom of left front frame gusset.

Engine Number - On front of right main engine case. Consists of five digit number preceded by P, M, H, J, K or L. Frame and engine numbers are not the same.

The following charts can be used as a guide to determine the proper frame or engine prefix according to model:

<u>MODEL</u>	<u>Letter Prefix</u>	<u>Frame Number</u>	<u>Letter Prefix</u>	<u>Engine Number</u>	<u>Displacement</u>
Ace 90 (90)	A	----	P	----	90cc
Ace 100 (92)	A	----	P	----	98cc
Ace 100B (92B)	A	----	P	----	98cc
Ace 100MX (93)	B	----	M	----	98cc
125 (94)	C	----	H	----	123cc
125MX (95)	D	----	J	----	123cc
100 (92C)	E	----	P	----	98cc
125/SC (97)	F	----	K	----	123cc
100/SR (98)	G	----	L	----	98cc
100/SL (99)	H	----	M	----	98cc
100/DS (01)	K	----	M	----	98cc
250/ED (71)	J	----	N	----	250cc

- A. Motorcycle frame number for Ace 90(90), Ace 100(92), Ace 100B (92B), and Ace 100MX(93) - a five digit number located on the frame above the left rear shock and preceded by an "A" or "B".
- B. Motorcycle frame number for 125's (94), (94A), (95), (97) and 100's (92C), (98), (99) - a five digit number located on the bottom of left front frame gusset and preceded by "C", "D", "E", "F", "G" or "H".
- C. Motorcycle engine number - a five digit number located on the front side of the right main engine case and preceded by a "P", "M", "H", "J", "K" or "L".

Neither the frame or engine numbers are protected by logos.

## HONDA

Honda motorcycles are manufactured in Japan, Belgium, Brazil and the United States. According to information from R.L. Polk and Company, Detroit, quoted in "USA Today", July 15, 1985, Honda outsold all other manufacturers combined in the first quarter of 1985. Honda's share of newly registered motorcycles in the U.S. in the same period was 58.66% according to the same source.

Since Honda is the motorcycle most frequently sold, it certainly follows that it is the most frequently stolen. At the time of this writing there are 11,250 unrecovered Honda motorcycles in the State of California. When one considers that there are a total of 26,231 unrecovered motorcycles in that state, the importance of Honda VIN information is obvious.

In the United States, Honda motorcycle information may be obtained through American Honda Motor Company Inc. 100 West Alondra Boulevard Gardena, Ca. 90247.

VIN SYSTEM: Honda motorcycles are following the 17 digit VIN system with certain exceptions. The last 14 characters of the VIN are stamped into the headstock. The full 17 digit VIN is recorded on the Federal Certification label which is also located on the headstock. Off road machines are stamped with 14 characters of the VIN. They do not have a Federal Certification label.

Honda motorcycles designed for road or street use should be registered with the complete 17 digit VIN as shown on the certification label. If this certificate has been removed a "trial and error" series of inquiries can be made using the alternative World Make Identifiers until a "hit" is made.

VIN 1986-1981

JH2	RC010	6	F	S	000542
World Mfr. Identity	Vehicle Code Including Type of MC, Engine & Line	Check Digit	Year	Plant	Sequential Production Number

**World Manufacturer Identity:**

JH2 = Honda - Japan  
1HF = Honda - USA  
YC1 = Honda - Belgium  
9C2 = Honda - Brazil

**Plant:**

C = Saitama - Japan  
M = Hamamatsu - Japan  
S = Susuka - Japan  
K = Kumamoto - Japan  
B = Belgium  
A = USA  
R = Brazil

**Vehicle Codes - This information follows for Honda motorcycles from 1985-1974.**

VIN - 1980 and prior

XL150	-	2000167
Model Designator		Sequential Production Number

The model designator generally contained a repeat of the model of the motorcycle, but not always. For example, the model XR80 has a VIN prefix of HE01 - Full examples of models and VINS are listed in subsequent material.

VIN Locations - Left side of headstock. This most frequently applies to models with tubular steel frame construction.

On vehicles with formed sheet metal frame construction on left side, above crankcase.

On mini bikes - left rear axle mount.

On Mopeds - lower left side of frame at main stand bracket.

Engine Numbers -

The engine number is not a VIN derivative nor a repeat of the VIN.

It is comprised of a model code and engine sequential production number.

Example:                   RC01E - 2204182

All engines are designated by the letter "E" between the model prefix and the sequential production number.

Engine Number Locations:

- 1 - Left upper crankcase behind cylinder (larger engines).
- 2 - Right upper crankcase surface behind cylinder (medium engines).
- 3 - Lower left side of crankcase (smaller engines).

The dies used by Honda for stamping engine and frame numbers are unique as the following illustrations show.

1234567890

A B C E L M P R S T Z

The following chart lists model numbers and beginning VINs and engine numbers from 1985-1978.

### 1986 HONDA MOTORCYCLES

## HUSQVARNA

Husqvarna motorcycles are built in Sweden. They are imported into the U.S. as trail, dirt, enduro and moto cross machines.

### VIN SYSTEM:

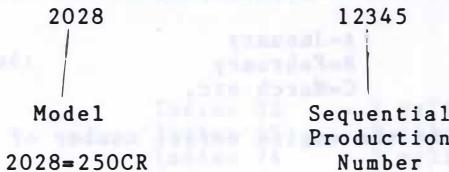

Husqvarna is currently producing the following models:

125XC	- T	500CR - MX
125CR	- MX	500XC - T
250CR	- E	500AE - E
250XC	- MX	500TX - MX
250WR	- T	510TX - T
250WRX	- E	510TE - E
400WR	- E	

Note: T=Trail, MX=Moto cross, E=Enduro

VIN Location - On right side of steering head.

Engine Number - Located on right side of engine. Engine number and VIN are not the same. First four digits indicate the model:

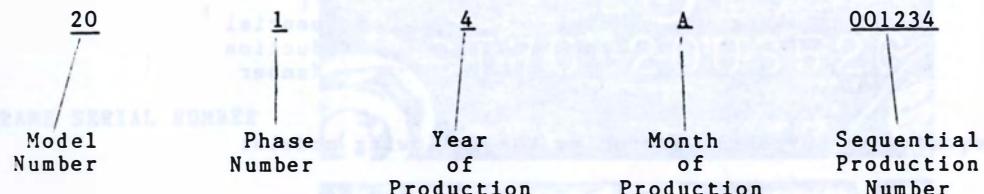

## INDIAN

Indian Motorcycle Company of Taiwan now builds only ATV's and Mopeds. From 1970-1976, the Indian motorcycle was assembled in Taiwan from parts made in Japan, Italy and Taiwan. From 1909-1953, the Indian motorcycle was built in the United States.

The following information relates only to the Indian motorcycle.

### VIN SYSTEM:

#### Model Number

- 13=MX 76B (75CC)
- 15=MX 80
- 16=MX74B (75CC)
- 20=ME-100A
- 22=MT-100
- 23=ML-100
- 30=ME-125

Phase Number - Used when a new designed part is used on motorcycle.

Production Year -  
4=1974  
5=1975  
6=1976-etc.

Production Month -  
A=January  
B=February  
C=March etc.

Production number will be the engine serial number of the motorcycle.

VIN System Cont'd

VIN Location - Stamped into headstock

Engine Number Location - Taiwan built - underneath air cleaner. Japan built under kick starter lever.

Number

VIN Location - Serial number is stamped on face of left rear fork end.

Engine Number - On left side of crankcase under front cylinder on twin cylinder models. On the Indian "4", the engine number is stamped on transmission case near the shifter shaft lever. Engine and serial numbers are not the same.

Vehicles produced:

Indian 35	- 2 cylinders
Indian 45	- 2 cylinders
Indian 74	- 2 cylinders
Indian 4	- 4 cylinders
Dispatch Tow	- 2 cylinders

## JAWA/CZ

The Jawa is manufactured at Strakonica, Czechoslovakia. The vehicles now imported are mopeds or racers. Street machines were last imported in 1979.

### VIN SYSTEM:

590 . 0 . 07631  
| | |  
Model Number Sequential Production Number

VIN Location - On plate riveted to headstock.

Engine Number - Stamped into crankcase, top side, right. Engine and serial numbers are not the same.

KAWASAKI

Kawasaki motorcycles are currently being produced in Akaski, Japan and Lincoln, Nebraska, USA. These popular machines rank number two in theft preference in the State of California with 3,744 outstanding in 1985. This is not remarkable however, when one considers that during the first quarter of 1985 Kawasaki, made up 10.27% of new registrations in the U.S. (Source - R.L. Polk and Co., Detroit.)

In the United States, information on these vehicles may be obtained through Kawasaki Motors Corporation, USA, P.O. Box 25252, Santa Ana, California, 92799-5252.

VIN SYSTEM:

Kawasaki motorcycles follow the 17 digit VIN system. The full VIN is stamped on the headstock and is repeated on the Federal Certification label. On off road motorcycles, the 17 digit VIN is stamped but there will be no Federal Certification label.

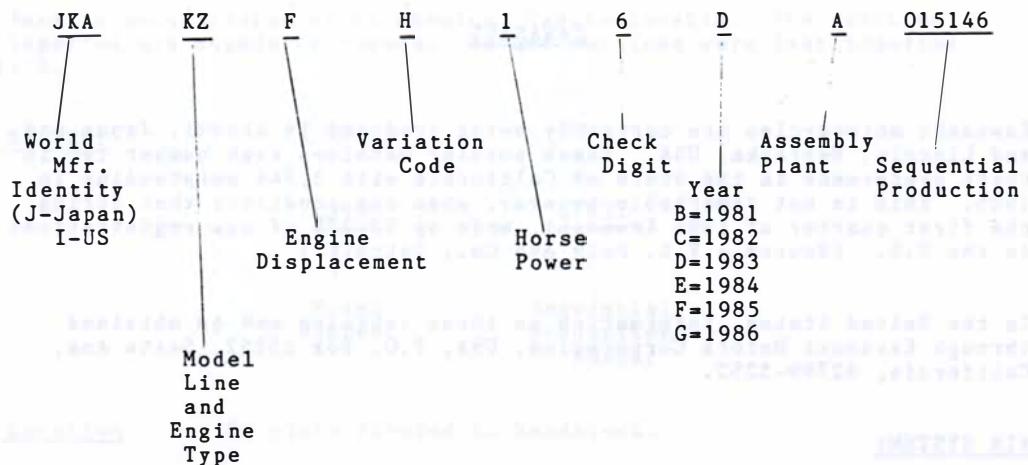

Beginning on August 18, 1980, Kawasaki began to apply the 17 digit VIN to all models. During early 1981, a miscalculation was made because of using an incorrect code and 3,136 model KZ440A2 and KZ440D2 motorcycles with a "B" assembly plant code were stamped with incorrect check digits. These vehicles are:

Model KZ440D - Beginning VIN JKAKZHA1BB500001  
Ending VIN-JKAKZHA1BB501608

Model KZ440d - Beginning VIN JKAKZHD1BB500001  
Ending VIN-JKAKZHD1BB501528

VIN SYSTEM:

1981-1986

VIN System prior to 1981

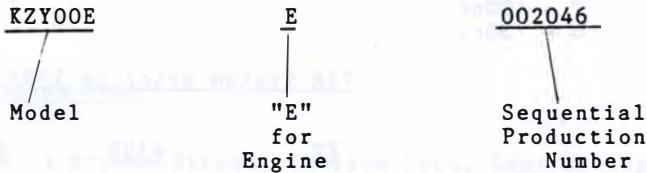

## VIN System Cont'd

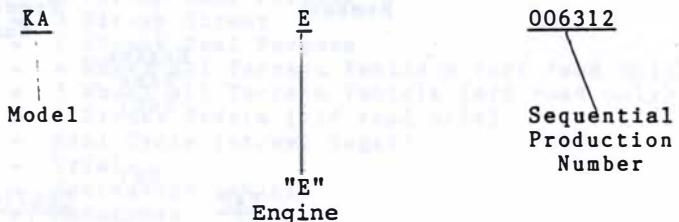

VIN Location - Stamped into headstock on right side. The Federal Certification label is to the left of the stamped number.

On some earlier models, this number was stamped on the left side of the headstock. Also on some early model machines, the number was stamped on the left side or right side panel, near the top of the shock absorber mount or the lower portion near the engine.

Engine Numbers - Engine numbers consist of a model code and sequential number. Engine numbers always contain the letter "E". While engine numbers bear some resemblance to frame numbers, they are not the same.

Earlier model engine numbers might appear as:

Engine Number Locations: Stamped into boss located on top of engine case. On earlier models, this number was stamped on the top right side of the engine case or the top left side of the case.

The following chart lists the location of engine and frame numbers from 1965-1975

LAVERDA

- Vin System: No example available
- Vin Location - On frame under seat. Also VIN and model number on plate attached to left side of headstock. May also be found stamped into headstock at that location.
- Engine Number - On right side of crankcase below cylinder. Also may be found on plate attached to top of right cylinder head.

MAICO

(Now being sold in US as "M-Star"). These vehicles are manufactured in Tubingen, West Germany and are Motocross or Enduro machines.

VIN SYSTEM: No example available

VIN Location - On right side of headstock

Engine Number - On right side of crankcase below cylinder in recessed area.

## MATCHLESS

No longer in production. These vehicles were built in England.

VIN SYSTEM: (No example available).

VIN Location - On left front down tube or left side of headstock.

Engine Number - On twin cylinder model on front of left side of crankcase. On single cylinder model located on left center of crankcase.

1950-1951 - ~~matchless~~ KTT

1952 & on - ~~matchless~~

To read up to year engine serial no - ~~matchless~~ engine serial  
To get on sale - regular purchase number to make right  
amount

## MONTESA

Montesa Motorcycles, Barcelona, Spain. No "street" machines are imported into the U.S.

### VIN SYSTEM:

VIN Location - On headstock

Engine Number - Same as VIN

Engine Number Location - On front engine mount or on front of right side of crankcase mounting flange. Also on top of crankcase.

Models Imported - 1985

COTA	242	TR*
Enduro	250H7	EL*
COTA	348	T/L*
COTA	330	TR*
Enduro	360H7	EL

\* = TR = Trials

EL = Enduro W/Lights

T/L= Trail W/Lights

MOTO BETA (MB)

These vehicles are built in Italy. None are imported into the U.S.

VIN SYSTEM: U-011438

Vin Location - On older models on right side of down tube gusset. On 1971 and later models on left or right rear motor mount or under left foot peg.

Engine Number - On top of crankcase behind cylinder, under carburetor air cleaner or on back of engine, right side.

MOTO GUZZI

Moto Guzzi Motorcycles, Mondello Del Lario, Italy.

VIN SYSTEM: No 17 digit VIN example available. For examples of VINs for older model vehicles see chart.

VIN Location - On headstock directly behind headlight.

Engine Number - Same as the VIN. Located on right side of crankcas below the right cylinder.

SIX Locations - On headstock

Motorcycle - Same as VIN

Engine Number - On front engine cover or on front of right side of crankcase mounting flange. Also on top of cylinder.

Serial Numbers - 1981

G7TA	342	TBA
G7TAE	34007	TBA
G7TA	348	TBA

## NORTON

Norton-Villers-Triumph Corporation  
(Discontinued Production 1976)

### VIN SYSTEM:

Model	Size	Sequential Production Number
175cc Pioneer - 3 s	850	F112356
175cc Stiletto - 3 s	850	133-000 to 135-000
175cc S.D.R.	850	1970-1973
175cc Sport	850	1971-72-73
230cc Pioneer	850	1973-1974

VIN Location - On left side of headstock. On early models may be on headstock or left down tube or gusset beneath oil tank. From 1969, the frame number was on a plate riveted to the headstock.

ENGINE Number - Stamped into crankcase on left forward portion immediately below cylinder. The number is placed in a 90 degree angle in the casting and is very hard to alter without detection. Until 1973, the engine and frame numbers were the same. In 1974 and 1975, these numbers were different. A typical engine number would be:

250cc	Stiletto 25-021- Tassol	314662	1973
250cc	Pioneer TA-1A Speedol	850 Commando	1969-70
250cc	H.A.T. TR-016- Tassol	850 Scrambler	1972-73-74
300cc	TA-1A- Tassol	850	1967
300cc	Pioneer 30-000- Tassol	850	1969-70-71
300cc	Explorer	850-000 to 851-000	1973-74
300cc	Pioneer 31- Tassol	850-000 to 851-000	1974

OSSA

Ossa motorcycles are produced in Spain. At the present time only the 350 Trails Trial is imported into the U.S.. No road machines have been imported since 1979.

VIN SYSTEM: 311-996

VIN Location - Located on front of headstock on an aluminum plate.

ENGINE Number - Same as VIN except preceded by the letter "M". Engine number is located on right front motor mount.

In 1980 the following models were imported:

250 Super Pioneer	- E
250 Super Phantom	- E
350 Trials	- T
350 Desert Phantom	- E

E=Enduro  
T=Trial

In 1977 the following models were imported:

	(cc)
Super Pioneer	-175-RT
Super Pioneer	-244-RT
Desert Phantom	-244-RT
GP 11 Phantom	-244-MX
Plonker	-310-RT
Mountaineer	-310-RT

RT=Road/Trail  
MX=Motocross

Prior to this, the following chart may be used for information on engine size, type, VIN parameters and years of distribution in the US.

175cc	Pioneer - 4 speed	155-459 to 155-509	1970
		155-640 to 155-690	1970
175cc	Pioneer - 5 speed	360-000 to 360-999	1971-72-73
175cc	Stiletto - 4 speed	153-000 to 153-999	1969
		155-000 to 155-399	1969

250cc	Explorer	330-000 to 331-999	1973-74
250cc	Phantom MX	180-000 to 180-999	1974
		181-000 to 181-999	1974

PENTON (Also called KTM)

(No longer imported into U.S.)  
Penton motorcycles are made in Austria

VIN SYSTEM:

V023  
Prior to 1972

1065076  
Since 1973

VIN Location - Stamped into headstock.

ENGINE Numbers - No information available on engine numbers.

Models Produced:

100cc - Penton Berkshire  
125cc - Penton Six Day  
175cc - Penton Jackpiner  
250cc - Penton Hare Scrambler  
125cc - Penton Trials  
350cc - Penton Mint

RICKMAN

(No longer in Production)

The Rickman is an assembled motorcycle made in England. The frame is the only manufactured item with engines and running gear purchased from Honda, Kawasaki or Suzuki.

VIN SYSTEM: No example available

VIN Location - Stamped into headstock.

ENGINE Number - Variable - depending on engine supplier.

ROYAL ENFIELD

(No longer in Production)

The Royal Enfield was produced in England.

VIN SYSTEM: 5396

VIN Location - On left side of frame at headstock.

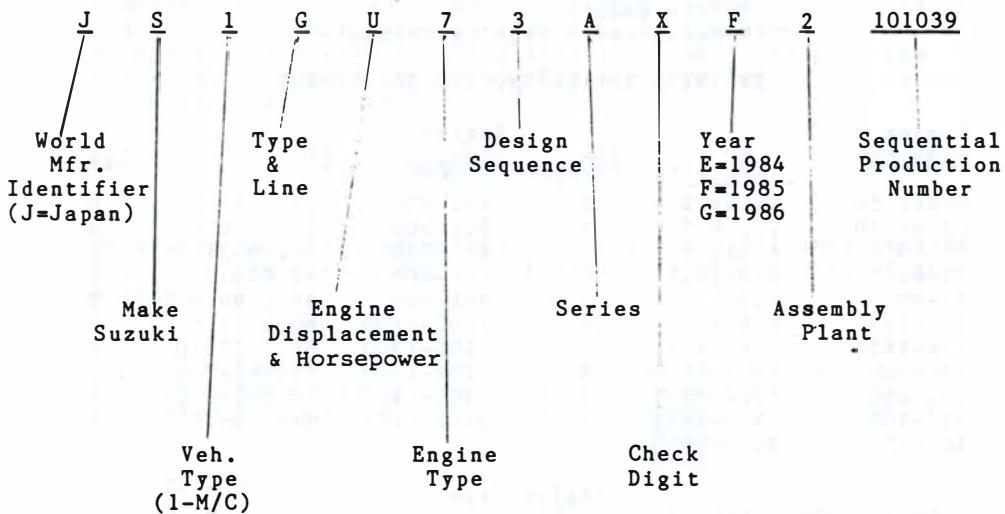

ENGINE Number 1B1626  
Engine Number located on left side of crankcase  
below cylinder head.

## SUZUKI

The Suzuki motorcycle is produced in Japan and is distributed in the United States by U.S. Suzuki Motor Corporation, 13767 Freeway Drive, Santa Fe Springs, California 90670.

According to information from R.L. Polk and Co., Detroit, Michigan, Suzuki motorcycles comprised 10.16% of new motorcycle registrations in the first quarter of 1985. In 1985, there were 2,603 unrecovered Suzuki motorcycles outstanding in California.

4 Stroke 4 Cylinder	7

VIN Cont'd

Vin Locations: Earlier models of the Suzuki motorcycle had their frame number locations varying from the left side of the headstock to the right side of the frame behind the engine. In 1967 models the VIN was stamped on a plate riveted to the headstock to the right of front center. Some models prior to 1969 had the number stamped on a flat surface near the swinging suspension arm pivot on the right side. Beginning in 1970, the frame and engine numbers were stamped into a plate riveted to the front of the headstock. This plate often partially or completely covered the VIN stamped into the headstock.

Engine Numbers: The engine number is generally located on either side of the crankcase below the cylinders. The frame and engine numbers generally do not match, although on some of the larger models the numbers have been found to be the same. Great care should be taken when checking an engine number through law enforcement computer systems. Frequently a "hit" will be made on a similar frame number.

Models produced 1971-1980

Following is a list of models produced from 1971 through 1980. The prefix indicates the type followed by the cc size of the engine:

TS = Enduro	GT = Sport (3 cyl)
TM = Motocross	T = Sport (2 cyl)
RV = Recreational	RE = Sport (Water Cooled Rotary)
TC = Trail	
GT = Sports	RM = Motocross Competition
RL = Competition (Trail)	A100 = Sports Type (Pressed Frame)
MT = Mini Trail	PE = Enduro Competition
	GS = Sports with Tubular Frame (400cc)

Trophy Trail-500-TR5T  
Avenger-500-TR5MX

1973  
Bonneville-750-T140 or T140RV  
Trident-750-T150V  
Tiger-750-TR7RV  
Daytona-500-T100R  
Trophy Trail-500-TR5T  
Hurricane-750-TRX75

1972  
Bonneville-650-T120R  
Bonneville-650-T120RV or T120V  
Trident-750-T150  
Trident-750-T150V  
Tiger-650-TR6R  
Tiger-650-TR6RV  
  
Daytona-500-T100R  
Trophy-650-TR6C  
Trophy-500-T100C

1971  
Bonneville-650-T120R  
Bonneville-650-T120RV  
Trident-750-T150  
Trident-750-T150V  
Tiger-650-TR6R  
Daytona-500-T100R  
Trophy-650-TR6C  
Trophy-500-T100C  
Blazer-250-T25SS  
Trail Blazer-250-T25T

1970  
Bonneville-650-T120R  
Bonneville-750-T120RT

Trident-750-T150  
Tiger-650-TR6R  
Daytona-500-T100R  
Trophy-250-TR25W  
Trophy-500-T100C  
Trophy-650-TR6C

1969  
Bonneville-650-T120R  
Trident-750-T150  
Tiger-650-TR6R  
Daytona-500-T100R  
Trophy-250-TR25W  
Trophy-500-T100C  
Trophy-650-TR6C

1968  
Bonneville-650-T120R  
Tiger-650-TR6R  
Daytona-500-T100R  
Trophy-250-TR25W  
Trophy-500-T100C  
Trophy-650-TR6C

Vin System - Prior to 1969 the VIN was composed of a model designator as a prefix, followed by two letters which represented the engine size and a five digit sequential production number.

Engine Number - Located on left side of engine crankcase at base of cylinder. From 1968 the engine number is stamped on a raised boss in this location. Beginning in 1969 the boss was inscribed with the Triumph logo prior to the number being stamped. Beginning in 1965 the frame and engine numbers are the same (although some exceptions have been noted). Prior to 1965 these numbers were different.

VELOCETTE

(No Longer in Production)

VIN SYSTEM: VNE-10062

VIN Location - On rear of top bar on frame, underneath right rear of gas tank (not visible except in short tank - Scrambler and Endurance Models).

Engine Number - Stamped on left side of engine case.

## VESPA

Vespa Motorcycles and Mopeds are imported through BIANCHI Vespa of America Corporation, 385 Oyster Point Blvd. #6, South San Francisco, California 94080

VIN SYSTEM: All Vespa products have a prefix that precedes the frame serial number. This prefix corresponds to the following identification:

<u>MOPEDS</u>	<u>FRAME PREFIX</u>
Ciao Standard	C7N1T
Ciao Special	C7E1T
Ciao Super	C7V3T
Ciao Supreme (Model equipped with turn signals)	C7E1T(C7E1T/B)
Bravo Deluxe	EEV1T
Bravo Super Deluxe (Model equipped with turn signals)	EEV1T/B
Grande Deluxe	048
Grande Super Deluxe (Model equipped with turn signals)	048/B

<u>MOTORSCOOTERS</u>	<u>FRAME PREFIX</u>	<u>ENGINE PREFIX</u>
Vespa 90 Sport	V9A1T	V9A1M
Vespa 125 Primavera	VMA2T	VMA2M
Vespa 150 Super	VBC1T	VBC1M
Vespa 150 Sprint	VLB1T	VLB1M
Vespa 200 Rally	VSE1T	VSE1M
Vespa 50 Special	V5B3T	V5A4M
Vespa P125X	VNX1T	VNL4M
Vespa P200E	VSX1T	VSE1M

Frame and Engine Number Locations

Models - C7N1T, C7E1T, C7V3T, C7E1T (C7E1T/B)

Frame Number - Under plastic chain protection cover, right side.

Engine Number - On right side of engine adjacent to cylinder head.

Models - 048, 048/B

Frame Number - On headstock, left side.

Engine Number - On right side of engine case, adjacent to cylinder head.

Models - V9A1T, VMA2T

Frame Number - Stamped on right side just above engine. It is necessary to remove engine side cover to see number.

Engine Number - On rear of crankcase next to oil fill plug.

Models - VNX1T, VSX1T

Frame Number - Stamped on body, right rear side (remove cowling).

Engine Number - Stamped on engine swingarm adjacent to exhaust pipe.

Models - VBC1T, VLB1T

Frame Number - Stamped on body, left side, below left cowl next to exhaust pipe.

Engine Number - Stamped on engine swingarm adjacent to exhaust pipe.

Model - VSE1T

Frame Number - Stamped on body, right rear side (remove cowling)

Engine Number - Stamped on engine swing arm adjacent to exhaust pipe.

Model - V5B3T

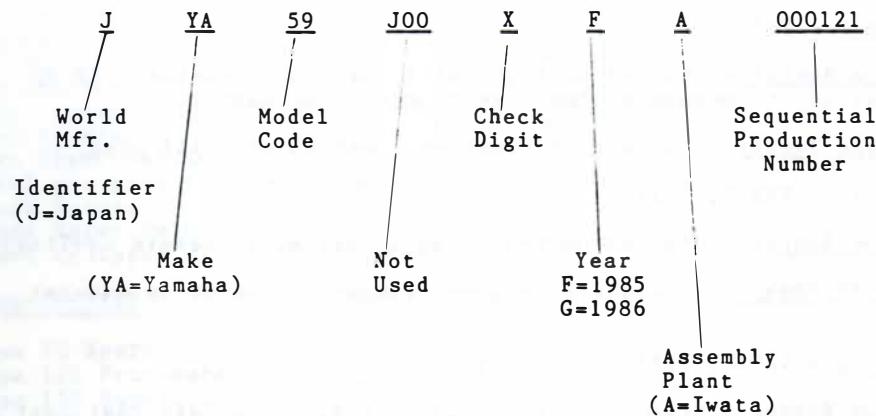

Frame Number - Stamped on body, right side, just above engine (remove side cover).

Engine Number - Stamped on rear of crankcase next to oil fill plug.

## YAMAHA

Yamaha motorcycles are produced in Iwata, Japan. The United States distributor is Yamaha Motor Corporation, P.O. Box 6555, Cypress, California 90630. The Yamaha motorcycle is an extremely popular machine and according to R.L. Polk and Co., Detroit, comprised 16.05% of new motorcycle registrations in the first quarter of 1985. In 1985 there were 5,807 outstanding stolen Yamaha motorcycles in California. This is second only to Honda.

XT500H	4R9	JYA-4R900-()-BA-001818

The engine prefix, which identifies the engine displacement in cubic centimeters, consists of two digits, or four digits, depending upon the size of the engine. The first single letter designates the engine type. These letters are slightly modified, beginning with 1978.

VIN Locations - Stamped into the right side of headstock. In 1981 and 1982 models this number consisted of a nine digit number that was a derivative of the full 17 digit VIN.

Example: J Y A 4 L 4 0 0 3 B A 2 4 0 6 6 0 (17 digit VIN)

4 L 4 2 4 0 6 6 0 (9 digit VIN stamped on frame)

The full 17 digit VIN was shown in its entirety on the Federal Certification Label. If the vehicle was intended for off-road use, there was no Federal Certification Label and the vehicle could only be identified by the nine digit number.

Beginning in 1983, the full 17 digit VIN was stamped on the headstock. The same number was repeated on the Federal Certification Label. If the vehicle was intended for off road use, there will be no Federal Certification Label

Engine Numbers: - The Yamaha engine number is a derivative of the VIN.

Example: VIN: J Y A 5 9 J 0 0 X F A 0 0 0 1 0 1

Engine #: 5 9 J 0 0 0 1 0 1

This number is stamped on top of the left or right side of the front portion of the engine.

VIN SYSTEM: 1974-1980

In 1974 the model number was changed and indicated the following:

Each Model designation consists of three parts: alphabetical prefix, number and alphabetical suffix.

<u>Example:</u>	<u>DT100A</u>	<u>Model</u>	<u>Engine Size</u>	<u>Year</u>
		DT (Enduro)	100 (Cubic Centimeters)	A (1974)

The prefix consists of two letters that indicate the type of motorcycle.

<u>Prefix</u>	<u>Type</u>
LB	Street - 2 stroke
RD	
RS	
LC	
QT	
SR	Street - 4 stroke
TX	
XS	
XJ	
GT	Mini
DT	Enduro
XT	
IT	Off-Road
TT	
YT	
MX	Moto Cross-Regular
YZ	Racer
SC	Scrambler
TA	Road Racer - Air Cooled
TZ	Water cooled
TY	Trial

The middle portion, which describes the engine's displacement in cubic centimeters, consists of two, three, or four numbers, depending upon the size of the engine. The final single letter represents the model year. These letters are alphabetically assigned, beginning with "A" in 1974.

VIN System Cont'd

These combinations were then translated into an all numeric prefix which was part of the frame number.

Example:

Model#:	RD	350	A	Frame #
				= 351-123456
	Street 2 stroke	350cc Engine	1974	

VIN Location: - Stamped into headstock right side. The engine number was the same as the frame number .

Engine Number Locations: - This varied according to model and engine size.

The following chart shows model number, frame prefix and engine number location from 1974-1976.

XT500C		1G8-6 digits (125cc) 1E6-6 digits (300cc)	
<u>RACER</u>		<u>1977 MODELS</u>	
YZ250C		509-6 digits	Top right
YZ400C		510-6 digits	Top right

This system was not absolute, however, and while the model numbers continued to show type, engine size and year, most late 1976 models and those following showed frame prefixes with a number, a letter and a number.

Example: 1976 175cc Trails  
Model Code: TY175C  
VIN: 1L8-000101

VIN System: Prior to 1974 consists of alpha numeric prefix followed by a hyphen and the sequential production number.

Example: DT1 - 50111  
Model Sequential Production Number

Vin Location: The frame number was stamped on the right side of the headstock. Prior to 1969 the VIN was stamped on the left side of the front down tube of the frame.

Engine Numbers - Prior to 1971 the Yamaha engine number was not the same as the frame (VIN) number. The location of this number was generally on the left side of the crankcase below the carburetor. The larger engines (650cc and 750cc) were stamped on the front of the engine.

#### FACTORY INFORMATION

When requesting factory information, Yamaha International requests that the following details be included for their benefit:

- |                           |                                       |
|---------------------------|---------------------------------------|
| A. Frame or Engine Number | C. Engine Size                        |
| B. Number of Cylinders    | D. Type of Frame (Pressed or Tubular) |

The Yamaha International Corporation can provide factory information as far back as the 1965 model line. In some rare instances, information may go back as far as the 1963 model series. Yamaha relates that cross-reference, shipping and customer information is available when sufficient tracing details are provided.

Due to the fact that the frame and engine prefixes are different on the older model Yamahas, it is essential that both the VIN and engine number be checked when making an inquiry through SVS or NCIC. It should be noted that there are Yamaha models that possess different sequential numbers as well as different prefixes. These instances are rare but do exist.

The following list describes the different models that have been produced. Included in this list are the frame and engine prefixes along with their respective beginning and ending sequential production numbers:
